PROFIT IN SHEEP.

Possesses a Flock. been defended and attacked from all cracks or crevices should be filled up quarters, having strong defenders and with clay or putty. The inside should persistent enemies, owing to the agita- have a good coating of lime, in which tion of the wool question in politics, but some carbolic acid has been mixed, and leaving out of consideration the quest the outside should be well tarred or tion of wool as a source of profit, there are other advantages in keeping sheep which are admitted by all. If a farmer only sold his sheep at their actual cost he would derive a profit. There is but little risk in sheep, except from disease or enemies, as they give a profit from several sources. The first advantage possessed by the farmer who has a flock of sheep is the utilization of waste products. Sheep will consume much that other animals will not accept, and will keep down weeds, thus saving labor to the farmer who has his fields overrun by weeds from seeds which are eartied by winds to his cultivated fields. Sheep are contented on scanty pasture, ground. preferring the short grass to that which is long, and by grazing very close they completely destroy the weeds that would otherwise start again. A large portion of their food really costs the farmer nothing during the summer, and with shelter from storm they are less liable to disease than other animals. If the lambs come early and are sired by purebred rams of the mutton breeds, they will more than pay the cost of the flock of sheep the first year. The farmer who keeps sheep for wool only will continue to turn his sheep out and meet with losses, but the one who aims to make a profit from ali sources provided by the flock will use precautions for safety. Shelter from the sun in summer and from the storms in winter assist in making sheep pay, and if they have been given something more than the pickings of the farm they will be in good condition in the fall to begin the nips, ensilage, fodder, hay, and be sat- The house should be removed every few Farmers who will begin with good noted that two important points, light panadera as she works. DEMAND FOR HORSES.

One Who Ought to Know Says It is as Brisk as Ever.

Col. Ed Butler is authority for the statement that there are more horses in St. Louis now than there ever have been in the entire history of the city. According to his figures, there are anywhere from 20 to 30 per cent. more now than there were during the palmiest days of the horse car or before the bike

"I am better prepared to know how many horses there are in the city than any other man living here. The reason is that I catch them coming and going. haul them off when they are dead.

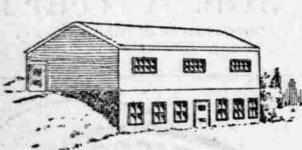

"I know that the average citizen belives that the advent of the trolley car and the bicycle dispensed with the use of horses almost entirely, but this is not the case. The bicycle dude and the trolley car patron never owned horses. The only horses the trolley car knocked out were the plugs that nobody would care to own, and there were not half as many of them as is generally supposed.

"Good horses are as hard to get now as they ever were, and probably harder, for the reason that not so many of them are being bred. You can't hire a rig at a livery stable any cheaper now than you could ten years ago, and if you drive out you will find more rigs on the streets than there were ten years ago. The trolley car has killed the market for scrub horses, and they are cheaper, but a scrub horse is not cheap is in contact with fowls that have it. at any figure. I have been trying to get a first-class team for three years, and am willing to pay any kind of a price for them, but I have not been able to waste. find what I want. I predict that withof the most profitable businesses in the country."-St. Louis Republic.

COMBINATION HOUSE.

A Practical Little Structure for Poultry.

The accompanying engraving shows a very practical house for poultry, hogs and tools. It is built against a bank which gives warm winter quarters in

PRACTICAL COMBINATION HOUSE.

the basement for the poultry and hogs. The second story is for a tool shed and work shop-the latter being in one end. One or more pairs of large doors open in the rear of the building, so that horse rakes, mowing machines, etc., can be run in easily. The open loft above can be used for storing small tools, such as rakes, hoes, forks, etc. This combining of two buildings in one serves two desirable purposes-it calls for only one roof to cover both and gives exceptionally warm quarters for the animals that are housed upon the lower floor.-Orange Judd Farmer.

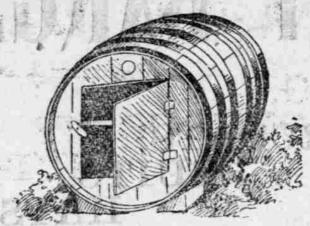

Fowls of any kind should not be confined any more than it is absolutely Lecessary unless they are being fattened for market. To keep healthy, fowls need exercise.

vantage it is very essential to grow plenty of grass both for hay and pasturage.

SHELTERS FOR POULTRY

BOYCOTT THE SCRUB.

It Does Not Pay to Feed Inferior Stock of Any Kind. Scrub stock may be a luxury enjoyed

by some farmers who refuse or neglect to breed to pure-bred sires, as a useless folly only for book farmers and experiment stations, but we see an excellent object lesson in the Live Stock Report, referring to feeding stock in times of depression. It shows the necessity of boycotting the scrub and selecting good grades to feed, which was never more important than now, and this should drive the scrub stock from the American farms and induce farmers who think, read and care for their own prosperity, to breed only pure-bred or high-grade stock that will return a fair profit for

the feed given them. The Report says: Feeders are obliged to invest cautiously. If ever there was a time when the feeding of inferior stock should be avoided it is now, and in placing their cattle in the feed lots we strongly advise feeders to select only such stock as can be safely depended upon to make good use of the feed given it, and return fair profits for the time, labor and money expended in fitting it for market. Stock cattle are high in value, it is true, when compared with fat cattle prices. This is because supplies are lightthat is, good ones. But it is usually better in the end to pay well for a good article rather than take a poor one because it is cheap, and even if we are to have low prices again next year as a result of the abundance of feed, we con-In order to grow stock to the best ad- fidently believe prime cattle will sell at prices that will repay the feeder his money invested, and leave a fair margin

of profit.

BREADMAKING IN ZUNI Peculiar Process Employed by the Pueblo Indian Women,

During a residence at Zuni, the largest of the Indian pueblos in northwestern New Mexico, I have often watched the mothers and daughters of the tribe at their interesting work of making haiwe, or "paper bread." They use a basis of either corn or wheat, which is often boiled in advance to make it more tender, and is then ground on much the same primitive style of stone hand mill as that used in Old Mexico. After the maize or wheat has been once ground through the hand mill it is passed through the same operation at least once more, to make it still finer, and then it is mixed into a very thin batter in an olla, or decorated water jar, fashioned from clay, fired and painted by the women pottery makers of the tribe, who are wonderfully adept in the potter's art and that of decoration in striking yet tasteful designs.

If the flour prepared for the baking be of wheat, the bread will be of a bluish tint, and if of corn, whiter. While the preparation has been made above the wood-fed flame burning in the fireplace of the stone or concrete house, there has been slowly heating a slab of stone, the upper surface of which is smooth and oily by long use in making haiwe. Kneeling before the hot stone when all is ready, the Indian woman dips her hand into the jar of water at her side and then swiftly sweeps that dripping Fatigue Means a Draught on One's member over the face of the tablet, leaving a broad veneer of liquid dough, which thoroughly bakes in a few seconds. Catching the thin edge of the sheet of bread by the fingers of the other hand, she then peels it almost off the smooth stone by one dexterous jerk, leaving one edge still attached.

Giving another sweep of her now freshly battered palm, she joins the two separate sheets into one by slightly overlapping the adhering film with the fresh application. The double operation of smearing and peeling continues in swift succession, and by the method described there is no break in the long considerable physical strength. The use of strip of bread, which falls in ever- a great deal of muscular energy, however, lengthening folds by the side of the takes great pride in her ability to show the entire baking in one unbroken sheet, no matter how long she may continue. When finished, the long bolt of of the leaves of an uncut magazine, and is then tightly rolled, that it may not dry. In this manner it is kept in a state of preservation for future use, for it is seldom baked for immediate consumption. This "paper bread" is not used for ordinary household purposes, but is baked when a party of warriors or hunters is making ready for a long trip into the wilds, or when some one is departing on an extended journey .-Woman's Home Companion.

PICTURESQUE SIENA. She Is the Typical Gothic City of

Siena, like a true daughter of Rome, is throned superbly upon many hills, but the wolf and the twins watch over a medieval city, and the ancient Colonia Julia Senensis holds, higher than any other Italian town save Florence, the double symbol of church and state in the middle ages, the towers of the

cathedral and of the public palace. We have seen the city in many phases, under black clouds with hailstones, shining in stormy, struggling sunlight against the sculptures of Fonte Gaia and the rain streamlets rushing down not only hatch better but will produce its steep streets; and we have seen it set like a town in a missalborder against a If any considerable number of geese still, flat, blue background of sky; we Osservanza, rising above its walls, which If ducks are kept be sure to arrange overhung the intermediate valley, and from distant southern Monte Oliveto its towers of the Mangia and the cathedral dwindled to mere pin points. We have strolled through its narrow streets at all times and at all seasons, have blinked at the dazzling facade of the Duomo in the glare of noon, and lingered in the great campo when it laywhite and still in the chill moonlight. We have watched the gray, bleak hills on which the town is pedestaled turned to freshest, tenderest green; we have climbed the slopes of the clive orchards and looked through skurrying snowflakes at the ramparts rising above us; and from every point, from without her gates and within her walls, from the towers above and the valley below. Siena makes one impression only upon us: Etruscan town, Roman colony as she was, the middle ages set their seal city of Tuscany, almost of Italy.-Scrib

Experiments with the Blind.

Wholly unsuccessful experimen with X rays were made upon two blin boys recently in the Corbutt laborator near Philadelphia. One of the boys h been blind since soon after his birt though he can distinguish the position of a brilliantly-lighted window. Tl other, who lost his sight at the age 13 years, cannot do even that. The former, when told to open and shut h hand in front of the excited tube, at fir declared that he could make out changing shadow, but his failure to te when another person's hand made th same motions proved that he had bee misled by imagination. His companio admitted from the beginning th neither the Crookes tube nor the fluor scope produced the slightest effect upo his eyes.-N. Y. Times.

Man's Mental Superiority.

Mrs. Hayseed (on a crowded Ne York thoroughfare)-Sakes alive! Ho air we goin' to git acrost the street? Mr. Hayseed (pointing to an e vated railroad station)-Now, see her Amandy, you must stop actin' as ef vo was never in the city before. Can't ye see that bridge?-N. Y. Weekly.

A Schoolboy on Homer. An able summary of the theories as to the authorship of the Odyssey was given the other day by a British schoolboy, who wrote: "It is said that writing was not invented when Homer composed his poems. He must therefore have lived a good deal later."

EXCESSIVE FATIGUE IS DAN-GEROUS.

Reserve Strength.

From the Leader, Cleveland, Ohio. John P. Sonnhalter, who lives at No. 58 small army who can bear testimony to Dr. family is his pride. He is strong and athletic and has a splendid physique. But, like many other men who are similarly fortunate in the possession of an excellent constitution, he recently overestimated the train which it could undergo. He is the pany, Nos. 25 to 31 Commercial St., and in that capacity finds it necessary to exercise did not seem to affect him in any manner self. He began to be troubled with conges tion, mental and physical prostration, relaxation of the muscular tissues, insomnia, and other symptoms of the result of overwork. But the story in his own words is interesting, for he tells it in the plain and simple manner characteristic of a man who earns his sustenance by the sweat of his brow, and at the same time he pays a glowing tribute to his inanimate and diminutive stamps. B. M. Lyster, Lyndonville, Vt.

"It was last May," said Mr. Sonnhalter, "that I began to notice the effects of my hard work. The blood would rush from my heart into my head, and almost make me faint. I felt that my strength was on the wane, and my entire system seemed to be out of order. Strong as I was I would feel weak. I was nervous, and telt distressed not only in body, but in mind as well. When I awoke in the morning I dreaded to think of the hard day's work which was ahead of me. My footsteps were not as light and sprightly as formerly, and I was altogether wretched. My appetite, always strong, vigorous, and healthy before, seemed to be deserting me. I could not sleep well, and was unable to get the rest and recreation I needed. The warm weather was at hand,

and I was afraid I would break down completely unless I got better soon. I was suffering, you might say, from genera, debility. Was tired all over, and nearly all the time. "I knew that something would have to be done, and soon, too. I talked with my friends about what to do or take. Some advised me to try this or that, but I did not heed their suggestions, and now I am glad of it. One day I picked up a little pamphlet or advertisement of Dr. Williams' Pink Pills. 1 told how the medicine cured people who were suffering from just what aired me, and I decided to buy a box, and I did. I A SLIP-a sprain-lame. St. Jacobs Oil was somewhat in doubt as to whether they were as good as it was claimed they were, b t my doubt was soon removed. Those pills fixed me up inside of two months. I never saw a medicine work so quickly and surely as those little pills. Almost the first one I took seemed to benefit me, and the more I took the better I felt. That awfully tired and dejected feeling began to leave me almost from the start. After taking half a dozen of the pills my sleep was unbroken. Then my appetite returned, and with it came my old time vigor. My muscles are as strong as ever now, and my hearth is good, and the pills did just what they were

advertised to do. "My work in the coal yard is hard, and I often have to overtax myself. But if I ever get in the condition I was last May, I'll buy mere of Dr. Williams' Pink Pills. They do Horn. more good than a doctor, and I have recom-

mended them to my friends." Dr. Williams' Pink Pills for Pale People are a specific for troubles peculiar to females, such as suppressions, irregularities and all forms of weakness. They build up the blood, and restore the glow of health to pale and sallow cheeks. In men they effect a radical cure in all cases arising from mental worry, overwork or excesses of whatever nature. They are manufactured by the Dr. Williams' Medicine Company, Schenectady, N. Y., and are sold by all druggists at 50 cents a box or six boxes for \$2.50.

THERE is more Catarrh in this section of the country than all other diseases put to-gether, and until the last few years was sup-posed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address F. J. CHENEY & Co., Toledo, O. Sold by Druggists, 75c. Hall's Family Pills are the best.
